## **Good of the Order**

Pres. Jerry Gerber notified the attendees that Speakers are already booked throughout the rest for this fiscal year including December 2012, where Prosecutor Barbara Tamos will be doing her presentation she gave two years ago in law with respect to contractors and inspectors. This is one all should attend. Barb uses dialog from the attendees to keep things interesting. Bring your questions that pertain to Law in the Contracting and Inspection areas. She will be able to answer them for you!!

## **Old Business**

Due to the restrictions opposed from Chapter one of the Ohio Building Code, inspectors are required to follow only what is on the approved plans.

It is suggested if the available fault current is not present on the approved plans; the inspector should approve the inspection regardless. If the plans have been approved, the inspector does not carry the authority to stray from them.

The inspector then should make note to the Chief Building Official and the Master Plans Examiner that it is a code requirement that available fault current must be present on all approved plans. Hopefully this will correct the situation that we are coming across in the field at this time.

## **Education**

Jack Bene' put on an exceptional performance as usual. The Dam and Reservoir illustration with reference to Electrical Currents is an outstanding approach.
